Hello, I'm Shehab, a meticulous front-end developer with 6 months of experience in building friendly user interfaces, interactive, responsive design, and reactive websites using Html, CSS, JavaScript, and the JavaScript framework Vue with APIs. I learned the fundamentals of computer science from Harvard CS50's online course, then I specialized in front-end web development. I enjoy learning and building everything with JavaScript, as in the first 5 weeks of my learning journey at Udacity, I built my first JS project, then I finished the course and delivered the 2nd graduation project with my additional features within 2 months. I learned how to communicate and work with a team from 3 years of experience in sales during my study period. I always take ownership of my professional development, continuously improve my knowledge, and sharpen my skills as I joined Forward McKinsey for the six-month learning journey. Currently, I'm looking for a front-end development position or internship that can combine my skills in the field and my passion for learning more technologies to sharpen up my skills and establish my career.

## PROJECTS

### My portfolio

*That's my website where I show my skills and projects.*

- Built with HTML5, CSS3, JavaScript ES6.

View at <https://shehab267.github.io/portfolio-hawari/>

### Finding Coach app [Live demo](#) | [Source code](#)

*It's a platform for connecting mentors with mentees that goes everywhere with you, helping you to achieve your goal, where you can get expert-level instruction and advice from professional senior coaches.*

- Built with a Vue, Vuex, routing, and solid authentication with firebase API.
- Register page with a solid authentication from firebase and powerful validation.
- Only logged-in users can become a coach or contact one.
- Used local storage for auto-login and auto-logout.
- Asynchronous data fetching on firebase API with a custom loading spinner.

### Weather journal app [Live demo](#) | [Source code](#)

- Web app that provides the weather forecast using OpenWeather API with node.js and Express environment, and promises to manage asynchronous JavaScript.
- The application dynamically updates the UI (city, temperature, background, and date) based on the prompted Zip Code

## Coursework

- **Udemy** *Vue-The Complete Guide (incl. Router & Composition API)*
- **Udacity, EGFWD** *Professional Front-End Web Development*  
Built web app using JavaScript, node.js, Express, and Agile methodology.
- **Harvard University** *CS50: Introduction to Computer Science*  
Learn Algorithmic Thinking and solve problems efficiently.
  - Topics include abstraction, algorithms, data structures, encapsulation, resource management, software engineering, and web programming
  - Languages include C, Python, and SQL plus HTML, CSS, and JavaScript

## EDUCATION

### B.Com, Benha University

Business Administration

Graduated 2021

## Skills

- HTML
- CSS
- JavaScript ES6
- Vue
- Vuex
- Vue Router
- GitHub
- Agile methodology

### Familiar:

- Node.js
- Express.js
- Firebase

### Platforms:

Jira & Trello & Notion

## LANGUAGES

- Arabic (native)
- English (Proficient)
